

Press release – Faulhaber SA

## **Faulhaber SA at the SINDEX trade show in Bern, Switzerland**

### **From September 5 to 7, 2023, the very latest drive technologies will be presented**

**September 1, 2023 – Faulhaber SA, as one of the most important drive manufacturers in Switzerland, has been present at the SINDEX in Bern ever since the first trade show in 2012. From September 5 to 7, Faulhaber SA will once again be showcasing its very latest drive technologies, which have even been used on Mars expedition robots. The focus of the products presented in 2023 will be linear actuators, which are primarily used for optics and photonics, automation as well as medical and laboratory equipment, as well as new motion controllers.**

It's nearly time – in Bern from September 5 to 7, 2023, the focus will be firmly on innovation and technology. SINDEX is one of the leading trade shows for industrial automation, electronics and technology in Switzerland. Since its establishment, the show has become the key venue for industry experts, engineers and companies. The trade show provides a platform for exchanging knowledge, ideas and innovations and helps promote technological development in Swiss industry. As an exhibitor at the show, Faulhaber SA, which develops and manufactures in Switzerland, will be there to strengthen the exchange of knowledge, ideas and "best practice" in the industrial world.

The responsible sales manager of Faulhaber SA, Rolf Leitner, is looking forward to attending: "For us, the show is an important opportunity to present ourselves in this setting and to showcase our product range. We use the trade show to maintain contact with existing customers and also to forge new contacts in application areas. The current trend indicates that after the pandemic the desire for personal face-to-face interaction has increased again substantially and that trade shows are a key platform for this."

#### **What will Faulhaber SA be presenting at the SINDEX 2023?**

This year, Faulhaber SA will be focusing on new linear actuator products, new motion controllers as well as products and application examples for the logistics robotics market. The Swiss team will also be showcasing other products in the area of microdrive and miniature drive solutions. Live demonstrations in particular are as popular as ever in the technology sector. The show also allows specially made products, for which Faulhaber SA has been able to build a strong reputation, to be discussed with potential customers. This year, the focus of the trade show will, among other things, be the presentation of Faulhaber SA as a completely Swiss corporation following the merger of four locations into one company in 2023.

#### **About Faulhaber SA:**

Faulhaber's headquarters were established in 1947 in Schönaich, near Stuttgart, Germany. As a subsidiary, Faulhaber SA has been producing in Switzerland for over 60 years in Croglio, Ticino and in La Chaux-de-Fonds, Neuchâtel. Faulhaber SA currently employs 450 people who develop and produce a broad spectrum of motor, gearhead and linear drive technology that form part of the extensive range of Faulhaber products. A large proportion of the components and drive systems manufactured in Ticino and western Switzerland is destined for renowned Swiss companies producing medical and laboratory equipment, optics as well as automation and robotics systems.
